

Content Delivery Network (CDN)

Medianova have invested in facilities and operational management of 15 Gbps and growing **Content Delivery Network in 8 countries** from Israel to USA West coast.

- Reliable Global Network
- Virtual Access Capacity
- Smart Packet Routing

The core of the Medianova's CDN is the smart load balancing system which analyzes every click and routes the traffic to the closest node. This process ensures the least cost with the highest quality.

Flexibility and upper hand gained by working with numerous datacenters. Medianova utilizes a buying power with this lease/partner strategy for you. In effort to reduce the end-users' cost, free market negotiations result in obtaining the best prices in any given country. Each and every POP and network is carefully tested by Network Operations Team prior to becoming part of Medianova's reliable CDN.

"The core of the **Medianova's** CDN is the smart load balancing system which analyzes every click and routes the traffic to the closest node..."

To benefit from Medianova's 'Low Cost' Smart Network, you can use your own encoders or use Medianova's Encoding Service for maximum ROI.

- Optimized for Streaming Priority
- Dispersed Network
- Smart Traffic Routing
- Least Cost Routing System
- Centrally Managed Multinational Platform

What is your Benefit?

Over the years, Medianova developed a unique system to encode VOD content on the fly. Basically, all you need to do is to log in to Medianova's system and upload your content. Our encoding cluster takes over and encode your files right

- No need for capital investment
- Flexible capacity availability that operates in junction with instant demand peaks
- Fault tolerant global network
- No risk of saturation
- Per Mbps or Per Terabyte monthly billing
